

WEBPACK HOSTING

Managed, enterprise-grade, clustered website hosting for 100% availability

- Multi-level geo-redundancy
- Load Balanced out of the box
- 100% uptime guaranteed
- Optimised for most CMS's
- Unique 4x4 Clustering
- Fully managed and supported

Our state-of-the-art hosting facilities provide fast, reliable and secure hosting at a level normally reserved for enterprise hosting. Our systems are managed around the clock with multiple power, link and failover protection.

Comprehensive help and support is on hand to ensure you or your web designers have access to our award-winning support team and inhouse experts.

Enhanced levels of speed and reliability are achieved with our unique 4x4 Clustered Hosting System - with 4 layers of hosting redundancy for every site, running on 4 levels of storage and network redundancy. Ultra high availability is built-in at every level to ensure your site and email is always available. Fully load balanced to ensure it's lightning fast for every visitor. WebPacks can cope with over 75% total systems loss at any one time.

4x4 Hosting - a new breed of reliability and performance

We've designed our whole network and hosting system to protect it from a single point of failure. We run at least 4 of everything across two geo-geographically diverse data centres:

- ▶ **Network** - 4 network ports on each server, bonded across a stack of switches, each with at least two routers (and multiple paths to the internet from each)
- ▶ **DNS System** - we run 4 over two different data centres.
- ▶ **Load and availability balancers** - 4 of these, 2 in each location.
- ▶ **Server Web and SQL Clusters** - we run at least 4 in each data centre for each service
- ▶ **Storage Clusters** - we run a co-operative, distributed RAID storage system for application and storage clusters, with data striped and replicated at least 4 times over 4 sets of drives (16 SAN storage systems).

First Class Email

All of our hosting comes with one of our coveted Business Email packages which includes customisable spam protection, virus scanning and webmail. 100% uptime is guaranteed thanks to an innovative mirrored mail system that works together in perfect duo-synchrony.

Well connected.

We operate 3 data centres in the UK and two in the US. Our primary systems are based in the very heart of the UK's internet infrastructure, Telehouse London. This is the most interconnected data centre in the Europe. All DCs have the highest security, power redundancy and fire protection.

CorNetworks is an established and award winning ISP who's aim is to bring high-tech and enterprise-grade services to small and medium-sized businesses. With our own Tier 2 network spanning the globe, our own 24 hour support and operation center and a complimentary range of skills in-house including networking, telephony, programming and web engineering department. All of these combine to form something we think is unique: A **well connected ISP** that has the tools and expertise to deliver something truly remarkable - **high-specification services on budget**. CorNetworks provides a full range of internet and telephony services including hosting, telephony, email, data storage, network consultancy and web engineering.

Features:

- ▶ 100% uptime GUARANTEED
- ▶ Fully managed
- ▶ 24/7/365 active monitoring
- ▶ Business-class email service included
- ▶ Clustered disks, cpu and storage for ultra-high availability
- ▶ Windows, Mac and Linux Support
- ▶ Fast connectivity (multiple links)
- ▶ UK-based technical support
- ▶ Google Analytics injection
- ▶ Comprehensive backups
- ▶ PHP, CGI, MYSQL support included
- ▶ Clustered SQL servers

Options:

- ▶ Secure SSL certificates
- ▶ Global CDN's
- ▶ Web Engineering and Scripting
- ▶ Individual Site Monitoring (Premium)
- ▶ Domain management

Typical Cluster Node Specification

- ▶ Dual Xeon 2.4Ghz with 96GB RAM
- ▶ At least 4 clusters running each site

Typical Storage Specification

- ▶ Multiple dual active-active controller raid system combined with...
- ▶ Cluster-based distributed RAID per node

Typical Network Specification

- ▶ CISCO-powered n+1 switch and routers
- ▶ Multiple 1Gbps and 10 Gbps Tier 1 links, dual LINX 1Gbps feeds, global peering.

WEBPACK 4X4 CLUSTERED HOSTING

Four cost-effective packages to choose from depending on the level of speed, space and facilities your website needs. Our WebPack Premier features around the clock extensive individual website monitoring. We also offer bespoke hosting services for larger sites or sites requiring custom configurations.
